Steam Assisted Oven

Better baking & roasting with external water tank

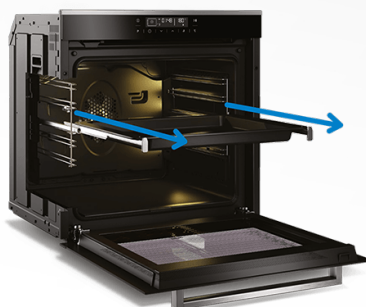

Beko ovens with the Steam Assisted Cooking feature help you cook delicious pastries, bread, meat & poultry. Cook easily fluffy pastries and bread with a crispy crust and juicy meat & poultry. During the cooking cycle, water is poured in the cavity directly from the water tank to bottom of oven cavity and steam forms. That makes it safe and convenient to put the water in the easy-to-fill water tank any time during cooking instead of pouring it into the bottom of the oven to create steam. It enables it to cook longer with steam, which prevents the meat & poultry from drying out during roasting.

Telescopic Shelves

Change which way the door opens for easier access

If you don't want to ruin the moment by struggling to get your culinary creation out of the oven, Beko's telescopic shelves will help you retrieve heavy dishes from the oven safely and easily. The full extension telescopic shelf comes out of the oven completely for maximum ease, while partial telescopic shelves come 2/3 of the way out.
